Dan Moldovan, Software Architect

Eindhoven, Netherlands, +31629438414, danmol18@gmail.com

LINKS LinkedIn

PROFILE Engineering is and has always been my number one passion ever since I was a little kid. Got my hands on my first book on C when I was 7 years old and started writing text-based rpg games. Never looked back. I have a strong background in web engineering, full stack development and software architecture. Together with good soft skills including leadership and communication I'm a strong candidate in any team

---

EMPLOYMENT HISTORY

Jun 2017 — Present

Software Architect, TechQuarter
Remote

Started as a Senior Full Stack Engineer but quickly grew into a Technical Lead and later migrated towards a Software Architect role.

Touched various businesses from real estate to insurance, financial technologies and big data applications

Helping shape one of the biggest FinTech companies in United States and watched and helped it grow from 1 to 100

Technologies: JavaScript, TypeScript, NodeJS, React, Angular, AWS, MongoDB, Serverless, Lambda, ECS, Terraform, Docker, Microsoft Azure, Microservices

Jun 2015 — Jun 2017

Senior Full Stack Engineer, Lateral
Cluj-Napoca

Worked as a full stack engineer and technical lead across various business spectrums from social media to marketing and real estate.

Was part of various teams of various sizes covering a wide variety of roles and technologies.

Played a key role in growing the company and their prestige as a valuable digital agency among the community

This was the role that got me into software architecture on a bigger scale

Technologies: JavaScript, NodeJS, AngularJS, Angular, React, AWS, MongoDB, PostgreSQL, Typescript, PHP, CakePHP, Microsoft Azure, Docker

Jan 2015 — Jun 2015

Senior Full Stack Engineer, Luminos Software
Cluj-Napoca

Was the first employee on the engineering team of this startup so I had to lay the ground work for all subsequent employees. Years later, they have grown a lot and are still using the architectural groundworks that I, together with the other founding engineers, have done

Worked on a singular modular project for a big marketing company where we tried to solve some of the issues they were facing by completely rethinking the way they do marketing and integrating bleeding edge technology in their pipeline

Technologies: JavaScript, CoffeeScript, NodeJS, AngularJS, Heroku, MongoDB, PostgreSQL, Ruby on Rails

Jul 2014 — Dec 2014

Junior Full Stack Engineer, Deisoft
Remote

My first stable job as part of a development team. Worked on multiple projects around e-commerce, marketing and social media.

Mostly either solo or small teams

Technologies: SQL, NoSQL, JavaScript, HTML, CSS, PHP, AngularJS, Laravel, Swift, iOS

Jan 2011 — Jul 2014

Freelance Full Stack Engineer

Worked on various projects mostly around e-commerce and marketing / digital agency types businesses

Mostly either solo or as part of really small teams.

Technologies: SQL, NoSQL, JavaScript, HTML, CSS, PHP, AngularJS, Laravel
